

## Scenario 1

Orientation = Portrait

## Scenario 2

Orientation = Landscape

### **Question**

You are given a task to create a responsive layout across all devices. According to scenario above, the requirement are :

- Use Flutter framework
- Fetch data using http request
- The layout must be responsive
- The screen contain scrollable list and toggle button
  - Button (1) will fetch from "<https://jsonplaceholder.typicode.com/photos?albumId=1>"
  - Button (2) will fetch from "<https://jsonplaceholder.typicode.com/photos?albumId=2>"

\*Recommend to structure your code using state management approach.
